

Balance bold colour with these cool natives

Break up that green palette and be captivated by our Australian natives. Incorporate some of the cool blues and icy greens of our native trees which provide unique, year round beauty.

Eucalyptus cladocalyx nana **DWARF SUGAR GUM**

This Australian native is a medium sized tree, usually multi stemmed, stout and solid in its growth habit. It is a much smaller growing tree than regular E. cladocalyx. It has yellow and blue-grey coloured bark with a mottled appearance. The foliage is a glossy dark green on top with paler undersides. During the warmer months, yellow flowers are produced, followed by large gumnuts.

Eucalyptus polyanthemus **RED BOX**

This Australian native tree naturally occurs on the tablelands of New South Wales and is capable of tolerating difficult, dry stony soils. Juvenile foliage is oval in shape and grey-green in colour whilst the mature, adult leaves are more ovate. The short trunk can be smooth or box like (fissured). Flowering occurs from September to January during which small white flowers appear.

Corymbia citriodora 'Scentuous' **(syn. 'Dwarf Pink')** **DWARF LEMON-SCENTED GUM**

This is a slightly narrow-domed Corymbia (syn. Eucalyptus), developed by Speciality Trees, doesn't shed its branches. It has a smooth trunk that may be slightly mottled. The bark is a pinky-salmon in colour. Leaves are narrow and highly aromatic when crushed smelling strongly of lemon. This tree features lovely cream-coloured flowers in summer.

Waterhousea floribunda 'ST1'

Whisper (syn. Syzygium)

WHISPER WEEPING LILLY PILLY

Unique to Speciality Trees and one of our most popular sellers! This is a versatile, bushy tree with a wonderful weeping habit making it perfect for large screening projects and the softening of fence lines. Propagated from Victorian mother-stock, unlike other Waterhousea, so responds better to all weather conditions, including cooler climates. New growth starts off pink with leaves turning to various shades of green as the foliage matures. Foliage is maintained to the base of the plant giving a year-round lush, full appearance. It forms a small quantity of creamy-white flowers in summer. Berry production on 'Whisper' is unlike other Lilly Pillies, with minimal quantities of small green berries that, whilst bird attracting, these fruits are tucked in amongst the foliage and are not obvious.

Angophora costata

SMOOTH-BARKED APPLE MYRTLE, RUSTY GUM

This attractive Australian native Angophora (syn. Eucalyptus) is loved for its smooth bark that is slightly purple in colour. It has large and twisted limbs and a very large expanded trunk base. It bears white flower clusters in spring. This tree has opposite leaves compared to alternate leaves as seen in eucalypt tree varieties. It has beautiful red new growth.

Lophostemon confertus

QUEENSLAND BRUSH BOX

A rainforest tree native to the North-Eastern parts of Australia, this is a fast growing tree which is rarely affected by pests and diseases. Dome-like in shape, it develops a very dense foliage cover of dark green, leathery leaves providing good shade for the summer months. This variety rarely sheds limbs and has salmon coloured bark which flakes off over summer revealing orange-brown tones on the trunk. Summer also brings clusters of small white flowers whose stamens give them a decorative fluffy appearance.
