

Flowering Gums are the Bees-Knees

These are truly the bees-knees in flowering gums. Planted now, you will be amazed by their fullness and colour in nine months time. Compact with showy flowering displays in summer, these trees are an absolute delight.

Corymbia ficifolia 'Baby Orange' **GRAFTED FLOWERING GUM**

This is a compact and tough Australian native with brilliant flowers in summertime. It produces numerous branches which form a dense canopy. Over the summer months it is covered with striking orange flowers, providing a feast for nectar loving birds. This selection of the common flowering gum was chosen for its bright orange flowers and compact size.

Corymbia ficifolia 'Baby Scarlet' **GRAFTED FLOWERING GUM**

A new grafted variety of ficifolia that has beautiful red new growth. A small compact growing native that adds great colour in the garden. The bird and insect attracting flowers are scarlet in colour and flower from Spring through Summer.

Corymbia ficifolia 'Summer Beauty' **GRAFTED FLOWERING GUM**

This is a stunning grafted flowering gum which produces masses of flowers in summer. Large glossy foliage is dark green in colour, highlighted by lighter green undersides. New growth emerges with a reddish tinge. Its flower colour is a beautiful, soft pink with a hint of apricot, produced over the summer months, followed by large gumnuts. Rich in nectar, this is a great bird attracting, small grafted tree.

Corymbia ficifolia 'Wild Sunset'

GRAFTED FLOWERING GUM

This grafted gum is smaller growing and has a compact habit, forming a very dense canopy. The foliage is deep green and leathery in texture with new growth emerging a bronzy tinge. During the warmer months large clusters of orange-red flowers appear covering the tree with a stand out display of spectacular colour, attracting and providing food for nectar loving birds.

Corymbia ficifolia 'Wildfire'

GRAFTED FLOWERING GUM

This is a tough and compact Australian native which puts on a brilliant display of fiery red flowers throughout the summer months, providing an abundance of food for nectar loving birds. This variety forms a dense canopy consisting of numerous branches and large, glossy dark green foliage which is highlighted by the lighter green undersides of the leaves. During the warmer months new foliage emerges with a reddish tinge.
