

## Winter is a great time to plant advanced deciduous trees

Trees are dormant in winter so planting becomes a task that doesn't interfere with their natural cycles. It's a great time to plant trees.

### **Acer palmatum** **JAPANESE MAPLE**

Acer palmatum can vary in height and size a little because they are grown from seed but in all cases it is a lovely small tree and very popular. They have a five lobed leaf and light green spring foliage usually turning deep orange and crimson in autumn.

### **Acer platanoides 'Crimson Sentry'** **UPRIGHT CRIMSON NORWAY MAPLE**

This is a flashy crimson foliated maple with dense upright branching. It has a compact growth habit with large crimson leaves in summer turning to gold and orange in autumn. Adds great colour contrast foliage. This is a small tree with grey-black bark that is lightly textured.

## **Cercis canadensis 'Forest Pansy'**

### **BURGUNDY REDBUD**

This small, attractive tree has spectacular heart-shaped, burgundy coloured leaves that continually change colour throughout the year. A rich purple in spring, the foliage transforms to green over summer, followed by a multi-coloured autumn display in tones of red, apricot and gold. The branches have a distinctive, smooth, dark brown wood which contrasts well with the blossom like pink flowers that are borne before the re-emergence of leaves in spring.

## **Jacaranda mimosifolia**

### **JACARANDA**

This fast-growing tree is an elegant specimen with soft, green foliage which turns yellow in winter before shedding. Flowering occurs in summer, when purple, bell-shaped blooms are produced, covering the canopy. The seed pods are very distinct fleshy curved green pods that eventually dry and open. It is an attractive open tree with branches upwardly ascending. A great summertime feature due to its stunning purple flowers.

## **Liriodendron tulipifera**

### **TULIP TREE**

This is a beautiful very large tree with large leaves that have a lovely shape and smooth soft texture. It has striking orange-yellowish flowers decorated with flecks of green in spring. The flowers are solitary and sit in the extreme upper-most branches, resembling tulips, hence the common-name reference to the tulip tree.

## **Pyrus calleryana 'Cleveland Select'** **CLEVELAND SELECT ORNAMENTAL PEAR**

A medium sized, fast growing tree with a 3-6m spread and symmetrical, pyramid shape. Branches grow dense and upright, making this variety particularly useful where space is a little more limited. This tree has fantastic scarlet red hues during Autumn and puts on yet another show in spring with an abundance of brilliant white blooms followed by brown coloured fruits. Although this variety thrives in well drained, rich soils, it will also adapt well to a range of soils including areas with heavy soils suffering from occasional wet to dryer conditions.

## **Quercus palustris 'Pringreen' -** **Green Pillar®** **UPRIGHT PIN OAK**

This is a columnar Pin Oak great for driveways and avenue plantings where space can be an issue. Deeply lobed foliage is a vibrant green turning various shades of bronze and deep red in the autumn months.

## **Ginkgo biloba** **MAIDENHAIR TREE**

What can we say about the Ginkgo tree that hasn't already been said? It is an old species, if not the oldest recorded, with one of the most unusual leaf forms. From bare limbs in winter, spring sees in a flush of bright green foliage that eventually turns an array of yellow and gold in autumn before falling. A very special tree and we have good numbers for you to buy now in 50 litre containers.

## **Magnolia x soulangeana 'Black Tulip'™**

### **BLACK TULIP MAGNOLIA (DECIDUOUS)**

This hybrid deciduous magnolia features deep purple, goblet shaped flowers which provide a knock-out display in late winter and spring before any leaves appear, creating a great contrast against its dark branches. Foliage appears after flowering and is a matte green colour. This is a woody, deciduous, upright growing tree which flowers from quite a young age.

## **Lagerstroemia indica x fauriei 'Sioux'**

### **CREPE MYRTLE (HOT MUSK PINK)**

Creating quite the visual impact over a lengthy period, this variety offers masses of intense, pink flowers over summer, followed by stunning, rich foliage colour in tones of yellow, red and orange through autumn, before shedding its leaves. When mature, the bark of this variety will peel, creating a mottled effect to reveal the beautiful caramel-pink colour of its underbark.

## **Lagerstroemia indica x fauriei 'Tuscarora'**

### **CREPE MYRTLE (HOT PINK)**

This deciduous tree has small oval shaped green leaves which turn a stunning reddish/orange in autumn. The most striking part of the tree is the beautiful display of vibrant, hot pink, crinkled flowers which appear in late summer. Flowers form on new growth, and so are encouraged by winter pruning. Bark peels off to reveal a smooth trunk which is beige in colour with red-brown streaks.

## **Liriodendron tulipifera 'fastigiata'**

### **UPRIGHT TULIP TREE**

A smaller tree which is more upright than it is wide, forming a tear drop shape with age. It offers the same beautiful characteristics as straight *L. tulipifera* but its growth habit is much narrower with erect, upright growing branches. From late spring to summer, large yellowish-green, tulip-like flowers decorated with orange markings appear. In autumn the large lime green leaves turn a rich, golden-yellow before falling. This variety is suitable for smaller gardens due to its narrow growth habit.
