

Tree	 <p>Angophora costata 'ST2' Boronia 'BORONIA' DWARF SMOOTH-BARKED APPLE MYRTLE, DWARF RUSTY GUM</p>
Description	<p>This attractive Australian native Angophora (syn. Eucalyptus) is loved for its smooth bark that is slightly purple in colour. It has large and twisted limbs, a very large expanded trunk base, white flower clusters in spring and beautiful red new growth. This variety, developed by and exclusive to Speciality Trees, is smaller in stature than the original, so it is more suitable for urban landscapes.</p>
Foliage	 Evergreen
Form	 Broad-domed
Mature Size	<p>8 x 8m</p>
Uses	<p>A versatile tree for sandy dry areas. Great for parks too and often seen in forest plantings. While ours is smaller in size and suitable for urban gardens it still needs space to show off its broad form. A nice selection for encouraging native habitat.</p>
Position & Soil	<p>Will tolerate most soils and conditions but especially likes sandy soils. Prefers a full sun position.</p>
