

Corymbia maculata 'ST2' Toombah

TOOMBAH SPOTTED GUM

This variety of Corymbia (syn. Eucalyptus), is developed by and exclusive to Speciality Trees. Compared to 'Lowanna', 'Toombah' is a much larger tree, but still full and with good form. It has a spotted trunk that is cream and grey. The foliage is dark green and it forms a dense canopy. Adult leaves are 10 to 20cm long and lanceolate shape. It has small white flowers that are clustered together.

It is a large tree, so it prefers open streetscapes and larger gardens. It is also used in parks as a shade tree. Great habitat for native fauna.

Can grow in infertile soils and dry sites but can also tolerate most soil types but must be well drained. Prefers a full sun position. Drought tolerant once established.
