

Eucalyptus caesia

CAESIA, GUNGURRU

Eucalyptus caesia is one of the best-known eucalypts. This species grows as a small tree of about 6-9 metres in height. It is perfect for residential gardens and native landscapes with limited space. It has deep green foliage and large flowers usually pink to red in colour. Flowering occurs in winter and spring. Flowers are followed by large, urn-shaped gumnuts.

A wonderful specimen tree. Can be used for parks and gardens or street planting. Perfect addition to any garden with interesting features all year round.

Prefers well-drained soil and protection from wind. Likes a full sun position. As a species native to relatively dry areas, it is best suited to climates with a dry summer.
