## Eucalyptus torquata x woodwardii 'Torwood'

Foliage Evergreen Form Broad-domed Mature Size 7 x 6m

Family Myrtaceae

## TORWOOD CORAL GUM

This small evergreen, native tree is a spectacular hybrid cross between E. torquata and E. woodwardia, which are both endemic to Western Australia. It has beautiful bluegreen foliage. Flowers are produced in spring and summer and are commonly large and clustered in a pretty mix of orange, scarlet and yellow tones.

Growing below 8m tall, and with such beautiful flowering, it is a good selection as a feature or street tree in a dry environment.

Bird attracting, this tree will thrive in an open, sunny, welldrained position. Drought and frost tolerant once established, it prefers a dry, low rainfall environment. Is very suited to coastal conditions. Refrain from high phosphorus fertilisers.
