

Eucalyptus woodwardii

GUNGURRU, LEMON-FLOWERED GUM

The lemon-flowered gum is native to the Victoria Desert area of Western Australia, near the Nullabor Plain. It has smooth, grey-brown bark and a narrow habit with an open crown. Beautiful yellow inflorescences and fruiting capsules are heavy and cause the branches to bend, giving the tree a weeping nature.

Considered to be one of the most spectacular arid-zone trees in the world, it is popular due to its attractive, large lemon-yellow flowers.

It is considered drought and frost tolerant and will establish easily in sand or sandy loams. Attracts bees and birds. Used as a privacy screening plant or a feature plant it has a medium growth rate and requires little pruning.
