

Ginkgo biloba 'Saratoga'

MAIDENHAIR TREE

This is a medium-sized, deciduous, fruitless maidenhair tree, with dense branching and an upright, rounded crown. Its fan-shaped leaves turn from yellow-green to bright yellow in autumn.

They are best planted in large open landscapes or parklands where they have plenty of room to grow. The fruitless 'Saratoga' is a male clone.

Ginkgo is best grown in full to partial sun. It is relatively pH adaptable but grows best in an acidic to neutral soil that's evenly moist and fertile.
