

Gleditsia triacanthos var. inermis

'Shademaster'

GREEN HONEY LOCUST

This is a beautiful, large, fast growing, deciduous tree with a broad, open, spreading canopy and weeping / pendulous branches. The dark to mid-green bipinnate leaves turn a rich yellow in Autumn, hanging gracefully from the tree well into the season. It is a popular selection for streetscapes and parks and a great choice for a feature shade tree in a larger garden. This is a thornless variety of Gleditsia.

A great, stunning feature tree. Can also be used in parks and gardens as it is a great filtered shade tree.

Best suited in deep, fertile, well-drained soil and in a full sun position. Can tolerate a wide range of growing conditions. Tolerates air pollution and urban conditions. Ensure any shoots that develop under the graft point are removed cleanly and promptly.
