

Hakea francisiana 'Intensity'

INTENSITY GRASS-LEAFED HAKEA

Hakeas are known for their delicate woven-looking flowers - this Australian native tree/shrub is no exception. Green linear leaves up to 150mm long x 3mm wide and slightly curved. The impressive flowers are pink-red and profuse through late winter & spring.

Extremely useful in the landscape – both domestic and commercial. This tree is very good at attracting native birds, and works well as a feature tree or planted in multiples along a fenceline for a great native screen option.

The species is similar to *H. bucculenta* and *H. multilineata* and all have fairly similar cultivation requirements. While the tree copes well with humidity, it is ideally suited to areas of low summer humidity. It is tolerant of moderate frost. The species grows and flowers best in an open, very well-drained, sunny position but it will tolerate some shade.
