

Leptospermum polygalifolium 'Copper Glow'

COPPER GLOW TEA TREE

This is a medium growing evergreen native shrub with small narrow copper foliage and masses of white flowers in spring. With these characteristics, it is a great selection for native gardens to attract birdlife, bees and other fauna.

A nice inclusion in a coastal garden or used as a low screen.

Leptospermum is tolerant of most soil conditions but prefers a well drained humus rich soil. Thrives in an open position in sun or part dappled shade.
