

Nyssa sylvatica

TUPELO

This is a deciduous tree native to north eastern parts of the US. With ornamental bark and deep green foliage that turns yellow to scarlet in autumn, it is an attractive feature tree for larger parks and gardens. Produces clusters of smallish blue egg-shaped berries.

As a moderately sized tree with lovely autumn colour, Tupelo would make an excellent specimen planting in a larger garden or reserve.

This tree prefers a humus rich, free-draining soil in a full sun position.
