

Prunus armeniaca 'Moorpark'

MOORPARK APRICOT

This is a relatively fast-growing, small tree with a spreading, rounded canopy. Its leaves are heart-shaped with serrated margins. Pinkish white blossoms appear in spring, followed by large, yellow apricots that ripen in mid to late summer. The fruit is sweet, rich and juicy and considered to be one of the best apricots for flavour.

As a feature tree and for production of fruit, this is a good selection.

Always prune in autumn so that pruning wounds heal quickly. Self-fertile but would benefit from planting up to two compatible varieties.
