

Prunus persica 'Golden Queen'

GOLDEN QUEEN PEACH

This is a clingstone, yellow-skinned peach with a firm yet juicy yellow flesh. It produces medium-sized fruit very late in the season. It crops well and is self-pollinating.

This variety is great for eating fresh, in preserving, stewing, canning and bottling.

Plant in a sunny position in well drained and well worked soil. Take care to plant the bud union (graft) above the soil level. Water in well and keep soil moist until tree is established. Fertilise when planting and again after new growth appears. Prune the tree when planting to encourage new growth.
