

Quercus suber

CORK OAK

This large evergreen tree is broad and rounded in shape with a dense spreading habit. One of its main features is its bark which is brown and fissured and quite soft. The leaves are dark green and have rounded lobes along the margins, and they remain dark green until they fall in autumn. Attractive acorns are borne in clusters. Native to the Mediterranean basin, this is one of the few evergreen Oak trees cultivated in Australia.

Traditionally harvested for its cork, this is a large tree mostly suitable for big spaces.

This very long-lived tree is a consideration for shade in large landscapes and parks. It is drought-tolerant once established. Requires a full-sun location.
